DETAILED ACTION

Claim Objections

Claims 28-36 are objected to because they are misnumbered. Because there is neither a claim 26 nor a claim 27, claims 28-36 are in actuality claims 26-34 and have been examined as such. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 4,6,8,14 and 28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- 1. Claim 4 recites the limitation "the general form" in line 2. There is insufficient antecedent basis for this limitation in the claim. Appropriate correction is required.
- 2. Please insert the word "the" between "wherein" and "relief in line 1 of claim 6.
- 3. Please replace the word "that", between "smaller" and "twice", with the word "than" in line 10 of claim 8.
- 4. Claim 14 recites the limitation "the distance" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim. Appropriate correction is required.
- 5. Claim 28 recites the limitation "the distance" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim. Appropriate correction is required.

Claim Rejections - 35 USC § 102

Art Unit: 3733

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Page 3

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-36 are rejected under 35 U.S.C. 102(b) as being anticipated by White et al. (US Pat. 7,048,740 B2).

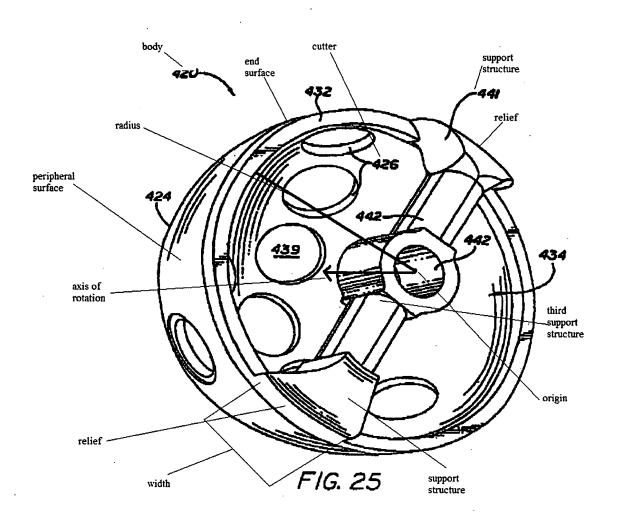

White discloses a reamer comprising a body 420 including a peripheral surface defined by a radius extending from an origin, said body defining an axis of rotation thereof, said body defining an end surface operably connected to peripheral surface and, said body defining a relief surface spaced from the axis of rotation and operably connected to peripheral surface of said body; a cutter 426 operably associated with said body; and a support structure 441 secured to the relief surface of said body (see Figure 25 below and col. 10 lines 63-67 and col. 11 lines1-15). The end surface of said body can be generally planar and perpendicular to the axis of rotation of said body; and the cutter and said body can be integral with each other (see Figure 25 below and col. 10 lines 63-67 and col. 11 lines1-15). The body can also have a general form of a hollow, truncated hemisphere (see Figure 25 below and col. 10 lines 63-67), and the relief surface of said body can also be generally planar and parallel to the axis of rotation (see Figure 25 below). The body can also define a second relief surface spaced from the first mentioned relief surface (see Figure 25 below) wherein the second relief surface can define a width dimension therebetween, the width dimension being substantially smaller

that twice the radius of said body (see Figure 25 below). The reamer can also further comprise second and third support structures secured to the second relief surface and secured to both first and second support structures for interconnecting said support structures, respectively. The reamer can also further comprise a driver (see col. 11 lines 7-15). The support structure can also be integral with said body (see col. 1 lines 13-15). and can also comprise one of a rib, a gusset, a bar, a tube, and a plate (see Figure 25 below and col. 11 lines 13-15). The support structure extends substantially along the relief surface of said body (see Figure 25 below). White further discloses a method comprising providing a cutting tool as disclosed above, cutting an incision in the patient, using the cutting tool to prepare a cavity for the prosthesis; and implanting the prosthesis (see col. 1 lines 20-32, col. 2 lines 44-51 and col. col. 6 lines 10-20). With regards to claims 9,10 and 14 White discloses the claimed invention except for the first and second relief surfaces defining an included angle therebetween, wherein said angle can be less than 90 degrees, and the distance between the first and second relief surfaces is less than 2/3 of the radius of the body. It would have been an obvious matter of design choice to one skilled in the art at the time the invention was made to construct the reamer of White with the first and second relief surfaces defining an included angle therebetween, wherein said angle can be less than 90 degrees, and the distance between the first and second relief surfaces is less than 2/3 of the radius of the body, since applicant has not disclosed that such solve any stated problem or is anything more than one of numerous shapes or configurations a person ordinary skill in the art

Application/Control Number: 10/812,426

Art Unit: 3733

would find obvious for the purpose of providing a forming edge in the heating portion or clamp. In re Dailey and Eilers, 149 USPQ 47 (1966).

Conclusion

Art Unit: 3733

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892 for art of cited interest.

Any inquiry concerning this communication should be directed to Tara George whose telephone number is 571-272-3402. The examiner can normally be reached on M-F 8am-5pm. If attempts to reach examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo Robert, can be reached on 571-272-4719. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either private PAIR or Public PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have any questions about access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll free).
